# College- and Career-Readiness in West Virginia

West Virginia's College- and Career-Readiness Standards have been developed with the goal of preparing students for a wide range of high-quality, post-secondary opportunities. Specifically, college- and career-readiness refers to the knowledge, skills, and dispositions needed to be successful in higher education and/or training that lead to gainful employment. The West Virginia College- and Career-Readiness Standards establish a set of knowledge and skills that all individuals need to transition into higher education or the workplace, as both realms share many expectations. All students throughout their educational experience should develop a full understanding of the career opportunities available, the education necessary to be successful in their chosen pathway, and a plan to attain their goals.

## College- and Career-Readiness in the Social Studies Content Area

West Virginia's College- and Career-Readiness Standards for Social Studies promote proficiency in civics, economics, geography, and history. Students will develop problem solving and critical thinking skills independently and collaboratively as they engage in informed inquiry in social studies. College- and career-readiness is supported in social studies as students acquire and further develop their abilities to be critical consumers of what they read or hear and to be informed sources when they write or speak.

The overarching goal of the standards is to give educators the opportunity to build a rigorous, relevant, challenging and developmentally appropriate social studies curriculum that prepares students for college- and career-readiness. West Virginia educators played a key role in shaping the content standards to align with the best practices in the field of social studies education. The contributions of these professionals were critical in creating a policy that is meaningful to classroom teachers and appears in a format that can easily be used and understood.

# Explanation of Terms

**Standards** are the expectations for what students should know, understand, and be able to do; standards represent educational goals.

## Numbering of Standards

The numbering for each standard is composed of three parts, each part separated by a period:

- the content area code (e.g., SS for Social Studies),
- the grade level or high school content area, and
- the standard.

Illustration: SS.3.1 refers to Social Studies, grade 3, standard 1. SS.W.20 refers to high school World Studies standard 20.

## Abbreviations:

W – World Studies

US – United States Studies

USC – United States Studies – Comprehensive

CS – Contemporary Studies

C – Civics

E – Economics

G – Geography

S – Sociology

P – Psychology

The following four areas of social studies form all the courses in grades K-8 and the majority of the high school courses that are not content specific (e.g. geography and economics):

## Civics

Civics addresses both citizenship and political systems. Citizenship education prepares students to be informed, active, and effective citizens who accept their responsibilities, understand their privileges and rights, and participate actively in society and government. To be successful participants in society, students must understand how to build social capital (a network of social relationships) that encourages reciprocity and trust, two characteristics of civic virtue and good citizenship. Students must be able to research issues, form reasoned opinions, support their positions and engage in the political process. Students exercise tolerance and empathy, respect the rights of others, and share a concern for the common good while acting responsibly with the interests of the larger community in mind. Students must learn and practice intellectual and participatory skills essential for an involved citizenry. To develop these skills, the curriculum must extend beyond the school to include experiences in the workplace and service in the community. While studying political systems, students develop global awareness and study the foundations of various world governments and the strategies they employ to achieve their goals. With respect to the United States, students learn the underlying principles of representative democracy, the constitutional separation of powers, and the rule of law. Students learn the origins and meaning of the principles, ideals, and core democratic values expressed in the foundational documents of the United States. Students recognize the need for authority, government, and the rights and responsibilities of citizens.

## **Economics**

Economics analyzes the production, allocation, distribution, and use of resources. The economic principles include an understanding of scarcity and choice, productivity, markets and prices, supply and demand, competition, role of government, international trade factors, and consumer decisions in a global economy. Understanding economic principles, whole economies and the interactions between different types of economies helps students comprehend the exchange of information, capital, and products across the globe. Learners investigate economic principles and their application to historical situations. Learners will work cooperatively and individually to analyze how basic economic principles affect their daily lives. Students become financially responsible by examining the consequences of and practicing personal financial decision-making.

## **Geography**

Geography encompasses physical and human systems and the interactions between them on local and global scales. People interact with the natural world in culturally distinct ways to produce unique places, which change over time. New technologies and perspectives of geography provide students with an understanding of the world, and the ability to evaluate information in spatial terms. The geography standards stress the world in which we live and the role of the U.S. in the global community. Students use geographic perspectives and technology to interpret culture, environment, and the connection between them. Students collaborate with one another and work individually using geographic skills and tools to ask geographic questions based on the five themes of geography (location, place, human-environmental interaction, movement, and regions). They acquire the necessary information, organize and analyze the information, and respond to those geographic questions. Students examine the varying ways in which people interact with their environments and appreciate the diversity and similarities of cultures and places created by those interactions.

## **History**

History organizes events and phenomena in terms of when they occurred and examines where, how, and why they took place. Students study how individuals and societies have changed and interacted over time. They organize events through chronologies and evaluate cause-and-effect relationships among them. Students analyze how individuals, groups and nations have shaped cultural heritages. They gather historical data, examine, analyze, and interpret this data, and present their results in a clear, critical manner. Students study origins and evolutions of culture hearths, settlements, civilizations, states, nations, nation-states, governments and economic developments. Through history, students understand the identity and origins of their families, communities, state and nation. Through history, students recognize the influence of world events on the development of the United States and they evaluate the influence of the United States on the world. Understanding the past helps students prepare for today and the events of the future.

## **College- and Career-Readiness Indicators by Grade Band for Social Studies**

The middle school and high school standards on the following pages define what students should know, understand, and be able to do by the end of each grade. The College- and Career-Readiness Indicators, provided in two grade bands – middle school and high school - and grade-specific standards are necessary complements – the former providing broad standards, the latter providing additional specificity – that together define the skills and understandings that all students must demonstrate.

## **Integration of Literacy in Social Studies**

Literacy strategies and skills are applied as students acquire information and communicate their learning and understanding of social studies. Integration of literacy in social studies is critical for student success. It is essential that instruction in literacy strategy and skills be purposefully and appropriately planned and embedded within social studies instruction.

# Contemporary Studies

Contemporary Studies examines the interactions between the United States and the world from 1914 to present day. Teachers will engage students in critical thinking and problem-solving skills as students learn and work with factual historical content, geography, civics, economics, and other social studies concepts. Maps, spreadsheets, charts, photographs, the arts, music, graphs, primary source documents, textbooks, and data from a variety of credible electronic and non-electronic sources will be used to synthesize, analyze, interpret and predict outcomes. The concept of globalization is explored and evaluated through the careful analysis of the interactions (between or among) the United States and other nation states, helping students recognize the interdependencies of the United States and other countries. Teachers will provide a venue for students to examine factors that influence changing political and economic relationships and foreign policies between the United States and its world neighbors. The impact of world events on the individual citizen and the reciprocal impact of an individual citizen's actions, in the democratic process, on world events will be emphasized.

## Civics

Civics is designed as a culminating U.S. Studies class that fosters informed citizens essential to the perpetuation of the American Republic. A U.S. Studies course is a prerequisite for this course. Students learn and utilize knowledge and skills for responsible, participatory citizenship based on a firm understanding of the principles and practices of our government coupled with civil rights and responsibilities, sound financial literacy and global awareness. Students investigate what has happened, explore what is happening and predict what will happen to the social, political and economic problems that beset America and the world using the skills and resources of the past and present centuries. Students continue to develop their critical thinking and problem-solving skills collaboratively and independently to become informed citizens and consumers who practice economically sound decision-making, are geographically aware of the physical and human landscapes of the world, and protect, preserve and defend their system of government. New and refined knowledge gained in Civics is communicated and shared throughout the community as students engage in community service and service-learning that allows classrooms to span continents and serve as the heart of the community.

## Economics

Understanding economics is essential for all students to enable them to reason logically about key economic issues that affect their lives as workers, consumers, and citizens. A better understanding of economics enables students to understand the forces that affect them every day and helps them identify and evaluate the consequences of personal decisions. As resources become scarce, as the economic environment changes, and as the economic impact of decisions becomes more immediate, students must make sense of the array of economic concepts, facts, events, observations, and issues in everyday life and develop the ability to make effective decisions about economic issues.

## Geography

The power and beauty of geography allows all students to see, understand, and appreciate the web of relationships between people, places, and environments. Geography provides knowledge of Earth's physical and human systems and of the interdependency of living things and physical environments. This geography course is based on the six essential elements and five themes of geography stressing the contemporary world and the role of the U.S. in the global community. Students will use geographic perspectives and technology to interpret culture, environment, and the connection between them. Students will use the geographic skills of asking geographic questions, acquiring geographic information, organizing geographic information, analyzing geographic information, and answering geographic questions.

## Standards vs. Curriculum

### COLLEGE- & CAREER-READINESS

#### STANDARDS

#### CURRICULUM

#### What's the Difference?

**Standards** are what we want students to know, understand and be able to do;  
**Standards** represent goals.

The **Curriculum** is an intentional learning plan to ensure students achieve the goals of the standards; the **Curriculum** represents the learning experience.

#### Standards and Curriculum

*A STANDARD is a goal. The CURRICULUM is a means to achieve the goal.*

##### Example 1 • 3rd Grade Mathematics Goal

###### **Standard:** M.3.8

*Solve two-step word problems using the four operations, represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.*

##### Example 2 • 6th Grade English Language Arts Goal

###### **Standard:** ELA.6.18

*By the end of the year, read and comprehend literature, including stories, dramas, and poems, in the grade 6-8 text complexity range proficiently, with scaffolding as needed at the high end of the range.*

###### **Curriculum:**

Teacher locates instructional materials, plans and facilitates learning activities and assesses the students' mastery of the standard.

# Overview of the WV TREE

West Virginia's online platform for educators is a one stop, grade- and/or content-specific site highlighting WV content standards, resources, and links that are essential to ensure high-quality educational programming. The resources include grade specific lessons, professional learning, and guidance documents crafted to help enhance teaching practice and guide the classroom teacher in the art of teaching. The links connect teachers with information regarding:

- Grade- and/or content-specific content standards, linked to resources to support use
- College and career readiness in West Virginia
- The formative assessment process
- Summative assessment login and resources (grades 3-12)
- Opportunities for professional learning
- Working with children with special needs
- Educator effectiveness and licensure (certification and evaluation)
- Guidance documents
- Programmatic level foundations for learning
- Additional resources

The WV TREE is designed with the teacher's busy schedule in mind, one stop, one focus, and tailored for the professional educator. This 'one stop' ensures teachers will not have to scour the WVDE website to find needed resources.

The WV TREE is a fluid website, with resources and content added on a regular basis. Additionally, future plans for the TREE include a site specific to principals, county chief instructional leaders, as well as counselors.
